**Social Sciences: Where Do Indigenous People Come From? A Case Study from Taiwan**
In natural history museums, *National Geographic* magazine, or even the *New York Times*, we often learn about undiscovered tribes and dying cultures. This fascination with purportedly unblemished, authentic and pristine peoples, the folks that “time left behind,” dates back to the nineteenth century in American culture. We will discuss the long-standing popular attraction of the
“untouched tribe,” while counterbalancing it with a case study of the history and political situation of living indigenous peoples in Taiwan.
Presenter: Paul Barclay, Professor of History

Natural Sciences: Pretty Living Things
Biologists are tasked with understanding life, which is pretty fun. But when that life is also colorful or ostentatious, things become downright enchanting. We will look at some of the animal kingdom’s gaudiest displays, examining how the study of these animals can influence multiple disciplines, from shaping our understanding of evolution, to informing conservation strategies, to the production of cosmetics.
Presenter: Mike Butler, Associated Professor of Biology

Humanities: What is Cinema?
Between 1958 and 1962, film critic André Bazin published a two-volume set of books titled What is Cinema? By the late 1960s, the books had become foundational texts for film students everywhere. You will learn how this seemingly simple question has shaped the field of film studies for decades and how it continues to compel scholars who take contemporary moving image practices as their objects of study.
Presenter: Katherine Groo, Assistant Professor of Film and Media Studies

Engineering: Brain-Computer Interface: Connecting Brain Activities to Real Actions
Brain computer interface (BCI) is a hardware and software communication system that enables humans to interact with their surroundings using control signals generated from electroencephalographic activity. The immediate goal of BCI research is to provide communication capabilities to severely disabled people who are paralyzed or ‘locked in’ by neurological neuromuscular disorders. You will learn about existing neuroimaging approaches to BCIs and see a demonstration of some BCI devices recently developed at Lafayette.
Presenters: Lisa Gabel, Associate Professor of Psychology and Neuroscience and Yih-Choung Yu, Associate Professor of Electrical and Computer Engineering

Interdisciplinary: Social Entrepreneurship
Students are increasingly inspired, encouraged, and empowered to leave their mark on the world. Desiring to have meaningful and productive careers, learn how social entrepreneurship and student demand for impact is reshaping higher education.
Presenter: Yusuf Dahl, Director of the Dyer Center

**WILLIAMS CENTER GALLERY—WILLIAMS CENTER FOR THE ARTS**

*William Wegman: Instant Miami*

In 1984 William Wegman and the Polaroid 20 x 24 camera traveled to Miami. Commissioned by the Lowe Art Museum “to see, to react, not to document” the city, Wegman spent a week exploring Miami with this cumbersome and conspicuous camera and its accompanying crew capturing life as he saw it, a surreal performance of the everyday and the extraordinary. Performers from the famous Les Violins Supper Club suddenly appear on the beach alongside sunbathers, everyday Miamians display their window shades, babies perform with showgirls.

Friday: 11 a.m.–5 p.m.
Saturday and Sunday: Noon–5 p.m.

**GROSSMAN GALLERY—WILLIAMS VISUAL ARTS BUILDING**

*Kate Gilmore: In Your Way*

The exhibit features nine performance-based videos that focus on Gilmore as solo performer and others with several women, wearing stereotypical feminine clothing and footwear while persistently performing difficult, labor-intensive tasks within self-constructed spaces. Gilmore synthesizes multiple mediums including performance, video, sculpture, and painting.
